

-
1. Some applications are better suited for TCP as opposed to UDP because TCP provides finer application-level control over the data.
 - A. True
 - B. False
 2. Multimedia applications over UDP — due to the lack of congestion control — enjoy better end-end performance.
 - A. True
 - B. False
 3. The transport-layer services provided by UDP include
 - A. congestion control, error checking
 - B. process-to-process data delivery, error checking
 - C. reliable data transfer, congestion control
 - D. reliable data transfer, process-to-process data delivery
 4. Reliable data transfer can occur at
 - A. transport-layer
 - B. link layer
 - C. application layer
 - D. all of the above
 5. Reliable data transfer is realized through
 - A. error detection
 - B. receiver feedback
 - C. retransmission
 - D. all of the above
