

-
1. The cause of network congestion — too many sources attempting to send data at too high a rate — can be treated by
 - A. error detection
 - B. retransmission
 - C. adjust sender's congestion window size
 - D. all of the above
 2. In TCP, define $cwnd$ to be the congestion window size, $rwnd$ to be the receive window size, the amount of unacknowledged data can not exceed
 - A. $rwnd$
 - B. $cwnd$
 - C. $\min\{cwnd, rwnd\}$
 - D. $\max\{cwnd, rwnd\}$
 3. During TCP slow start, the sender's initial rate is slow but ramps up exponentially fast.
 - A. True
 - B. False
 4. The goal(s) of TCP congestion control include
 - A. don't congest the network
 - B. make use of all the available bandwidth
 - C. distributed: realize global objective based only on local information
 - D. all of the above
 5. When the congestion window size is w bytes and the current round-trip time is RTT seconds, TCP's transmission rate is no more than _____
